## WFMLRSVCAApp.ear file not found

I am trying to install Oracle 11g in my laptop. Im downloading the setup files from here:

<http://www.oracle.com/technetwork/database/enterprise-edition/downloads/112010-win64soft-094461.html>

I have downloaded win64\_11gR2\_database\_1of2.zip and win64\_11gR2\_database\_2of2.zip .

I have put them in the same folder and started the setup file from the 1of2 folder. I go until certain steps and finally during installation i get **WFMLRSVCAApp.ear** file not found popup.

I googled and i see some solutions where 1of2 and 2of2 file should be unzipped to same folder and then start setup. I did the same couple of times but still im getting the same error. Any anyone guess what is missing?

This error occurs because the Oracle installation comes in two separate files. The instructions indicate that these should be unzipped into the same folder. So when you decompress the zip files, copy the contents of database/stage/Components of 2of2 into the database/stage/Components of 1of2.

### 5 Answers

extract win64\_11gR2\_database\_1of2.zip into win64\_11gR2\_database\_1of2 folder first.

Then extract win64\_11gR2\_database\_2of2.zip into win64\_11gR2\_database\_2of2 folder.

copy all 4 files in database/ stage/ components folder in win64\_11gR2\_database\_2of2 folder(unzipped) & paste them (no replacement) in database/ stage/ components folder in win64\_11gR2\_database\_1of2 (unzipped).

Then run the setup again. I experienced in it. It works..

thanks! I have been struggling with it for quite a long time. It worked. +1. Cheers!!! – [qwerty](#) Sep 8 '14 at 18:26

Bizarre. Just extracting both into the same directory didn't work for me, but separate directories, and then copying over the 4 subdirectories, did work. – [Mike Demenok](#) Aug 11 '15 at 7:04

Apparently unzipping part 2 in the zipped folder messed up for me and created this error. Thanks for your answer. – [Lex van Buiten](#) Mar 14 '17 at 11:24

What you have to do is copy what is inside components folder ( i think four files ) in win64\_11gR2\_database\_2of2.zip and paste it inside the win64\_11gR2\_database\_1of2.zip components folder and re run the setup . it works

If you are installing the Oracle Identity Management 11gR2 , you might receive the WFMLRSVCAApp.ear file missing during Installation error during the database installation.

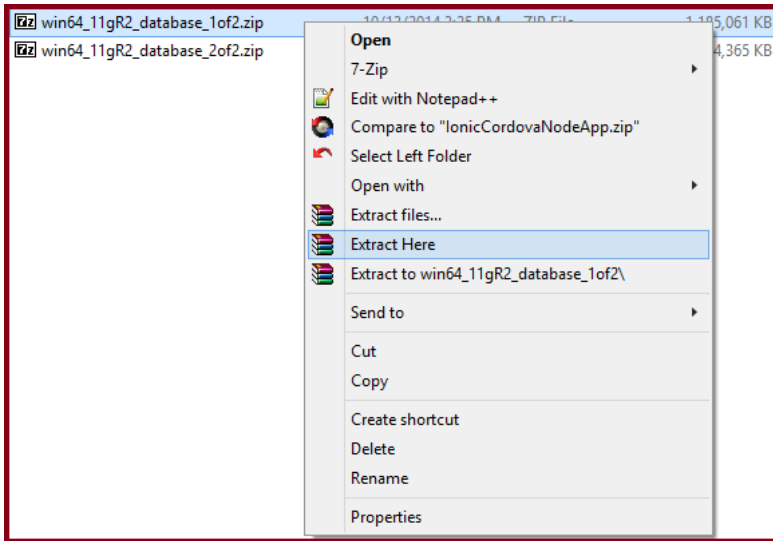

The way to resolve this error is:

Make sure you downloaded two disk

- win64\_11gR2\_database\_1of2.zip
- win64\_11gR2\_database\_2of2.zip

Steps:

1. Right click the win64\_11gR2\_database\_1of2.zip file and select **Extract Here**.

2. The software will extract in the folder named **database** as below,

database	3/30/2010 6:18 PM	File folder	
win64_11gR2_database_1of2.zip	10/13/2014 3:25 PM	ZIP File	1,185,061 KB
win64_11gR2_database_2of2.zip	10/13/2014 3:04 PM	ZIP File	984,365 KB

modified for **Components** folder.

Workspace (D:) > Software > Oracle > Oracle 11g > New folder > database > stage			
Name	Date modified	Type	Size
Actions	3/30/2010 6:47 AM	File folder	
ComponentList	3/30/2010 7:41 AM	File folder	
<b>Components</b>	3/31/2010 12:15 PM	File folder	
cvu	3/30/2010 8:05 AM	File folder	
Dialogs	3/30/2010 6:47 AM	File folder	
ext	3/30/2010 8:05 AM	File folder	
fastcopy	3/30/2010 9:31 AM	File folder	
globalvariables	3/30/2010 6:48 AM	File folder	

4. Do the same for win64\_11gR2\_database\_2of2.zip file and click extract here, the extracted file will be placed in the same **database** folder

5. Now check the Date modified

Workspace (D:) > Software > Oracle > Oracle 11g > New folder > database > stage			
Name	Date modified	Type	Size
Actions	3/30/2010 6:47 AM	File folder	
ComponentList	3/30/2010 7:41 AM	File folder	
<b>Components</b>	8/14/2015 4:34 PM	File folder	
cvu	3/30/2010 8:05 AM	File folder	
Dialogs	3/30/2010 6:47 AM	File folder	
ext	3/30/2010 8:05 AM	File folder	
fastcopy	3/30/2010 9:31 AM	File folder	
globalvariables	3/30/2010 6:48 AM	File folder	

6. That's it, now you can start by clicking setup.exe under **database** folder.

Hope it helps to understand easily!!

I had the same problem but it's an easy one to solve: Download WinMerge and use it to merge the 2 folders that come out of the zip file from Oracle. That will do it.

1) **Normally extract** win64\_11gR2\_database\_1of2.zip and win64\_11gR2\_database\_2of2.zip

2) Copy directory

C:\Users\Fatality\Downloads\win64\_11gR2\_database\_2of2\database\stage\Components (**from** extracted win64\_11gR2\_database\_2of2 directory)

to

C:\Users\Fatality\Downloads\win64\_11gR2\_database\_1of2\database\stage\Components (**in** extracted win64\_11gR2\_database\_1of2 directory)
